

Energy conservation is important to the sustainability of our environment today and for future generations. Showing the community that your business has taken steps toward becoming energy-efficient is one way you can be a part of the solution. PNM offers several energy efficiency programs to help reduce your carbon emissions, reduce the costs of operating your business, and receive rebates and incentives that help offset the cost of building improvements. Talk with our energy experts to learn which programs are right for your business goals, and start building a smart energy future for your business.

PNM Quick Saver™

Reduce your energy usage by making lighting or refrigeration retrofit upgrades. Start with a free energy assessment to learn where you can save, receive a written proposal, and then you decide how to move forward after reviewing the recommendations and rebate offers.

Visit pnmenergyefficiency.com/quick-saver

Retrofit Rebate

Improve your existing facility with prescriptive or custom energy-efficient improvements. Receive rebates for installing energy-efficient equipment such as lighting, heating ventilation, HVAC, refrigeration, and food service equipment that help you reduce your energy use and save you money in the long run.

Building Tune-Up

Optimize your facility's performance and offset the cost by improving the energy efficiency of your existing operations through the Retro-Commissioning program. We help customers by paying for the building assessment and providing rebates for the savings. Certify your team through the Building Operator Certification program.

Multifamily Program

Improve the efficiency of your multifamily apartment property and receive rebates for installing energy-efficient upgrades in-unit and in common areas. Apply and connect with an authorized PNM contractor to start a free audit and learn about the most cost-effective energy upgrades that can be made for your property.

Refrigerator & Freezer Recycling

Manage the energy costs for your office building or multifamily residences by disposing old refrigerators or freezers that contribute to high electric bills. PNM properly recycles 95 percent of the unit and gives you a rebate for responsible recycling.

New Construction Rebates - Commercial Buildings

If you're a commercial builder building a new facility from the ground up, consider a comprehensive approach for building a high-performance facility. You can earn rebates for implementing energy-efficient designs and for exceeding standard energy code requirements on building equipment and systems during new construction.

Visit pnmenergyefficiency.com/new-construction

New Home Construction Rebate

If you're a residential home builder, you can earn rebates for building energy-efficient homes that include efficient HVAC, lighting, water heaters, refrigerators, and smart thermostats.

DEMAND ENERGY RESPONSE PROGRAMS

PNM Power Saver™ - Small Business

Balance energy use during times of high demand while saving money. Small businesses who use refrigerated air conditioners receive an annual incentive payment to reduce electricity use when demand is at its highest during the summer. Visit pnm.com/powersaver

PNM Peak Saver™ - Large Business

Large businesses can help balance energy use during times of high demand by reducing the amount of electricity they use during peak demand days. Receive an annual incentive based on the amount of electricity managed during your participation in the program.
